

Iron and Copper Mining

On January 7, 2026, a conference on "Iron and Copper Mining" was organized for our department's students. The conference was given by Muammer Kobaş, a mining technician working as a plant manager at Bilfer Mining Inc. The conference covered the geology of the mine, open-pit mining production, crushing, screening, and grinding operations in the ore processing plant, and magnetic separation and flotation processes used in enrichment.

The conference concluded with a question-and-answer session where Muammer Kobaş and Özlem Kobaş, both graduated of our department in 1997, shared their professional experiences.
