VOCATIONAL TRAINING MODEL IN ENTERPRISES (7+1), (3+1)

»» What is the 7+1 and 3+1 Vocational Training Model?

The 7+1 and 3+1 vocational training model is a system applied in Faculties/Vocational Schools at Universities for vocational and technical education. In this model, students receive theoretical courses and in-school practical training during the first three/seven semesters, while in their fourth/eighth semester they receive hands-on training at workplaces. This way, students have the opportunity to step into professional life and gain experience before graduation.

»» Purpose of the 7+1 and 3+1 Model

Development of Vocational Skills: Enables students to develop their professional skills by applying theoretical knowledge acquired during their education in real work environments.

Increasing Employment Opportunities: Increases students' chances of employment after graduation by introducing them to the business world earlier.

Building Connections with Employers: Students gain an advantage in their post-graduation job search by establishing connections with the workplaces where they receive practical training.

VOCATIONAL TRAINING MODEL IN ENTERPRISES (7+1), (3+1)

»» How the Model is Applied

The 7+1 and 3+1 model is implemented through the following steps:

Theoretical Education (3rd Semester/7th Semester): Students learn the fundamental theoretical knowledge of their profession through vocational courses at school.

Practical Training (1 Semester): In their final semester, students complete internships at contracted workplaces or companies operating in their field.

Supervision and Evaluation: Students' performance at workplaces is evaluated and graded by school and workplace authorities.

»» Advantages

Real Work Experience: Students gain experience by working in a real work environment before graduation.

Application of Theoretical Knowledge: They learn how to apply the knowledge they acquired theoretically in practice.

Ease of Finding Employment: The performance they demonstrate during practical training serves as an important reference in their post-graduation job search.

VOCATIONAL TRAINING MODEL IN ENTERPRISES (7+1), (3+1)

»» Conclusion

The 7+1 and 3+1 vocational training models stand out as an important innovation in the field of vocational and technical education. They offer great opportunities for students to prepare for professional life and develop their vocational skills. They help develop university-employer relations, responsibilities related to the field of work, and organizational and production abilities. Additionally, this model aims to enrich current activities and work experiences that enable students to become familiar with occupational safety systems and new technologies.
